CRYPTO SIGNAL RESEARCH / FREE SAMPLE

Bitcoin rebounds. Confirmation still matters.

A short market read with visible evidence, competing signals, and clear limits.

SNAPSHOT: THROUGH OCTOBER 4, 2026 (UTC) | STATIC SAMPLE

LATEST COMPLETED CLOSE	DAILY MOVE	RESEARCH READ
$86,507.11	+2.08%	Mixed / rebound

The evidence points both ways

Bullish: The October 4 candle closed near its high after two rising daily closes.
Bearish: That close remains below the October 2 high of $87,249.05.

What would change the read?

Our interpretation: a daily close above $87,249 would strengthen the breakout case; a close below $84,680 would weaken the latest rebound. These are observation levels, not trade instructions.

How the read was produced

Daily move = (latest close / preceding close - 1) x 100. Candle colors compare close with open. Observation levels use the October 2 high and October 4 low. The narrative is an editorial interpretation of the displayed candles.

Scoring: No numeric score or probability is assigned. This sample has no tested predictive model. "Mixed / rebound" describes conflicting observations, not a buy or sell rating.

Unavailable or outside scope

RSI, moving-average crosses, ETF flows, derivatives positioning, and on-chain signals were not verified for this sample. Cup-and-handle confirmation is not assessed from this seven-day window. Volume confirmation is not included.

Preserve the original

Keep this dated edition intact. A later update should carry a new timestamp and explain any material change. The companion evidence file preserves the displayed inputs and retrieval time.
